

Amineddine Znin

Software Developer · Cybersecurity Engineer · AI-Augmented Workflow Specialist

amineddine006@gmail.com · +212 766 171 159 · Marrakesh, Morocco · [linkedin.com/in/amineddine-znin](https://www.linkedin.com/in/amineddine-znin)

PROFILE

Full-stack developer and cybersecurity engineer with 4+ years of independent practice. I build production-grade web applications and security tooling — from SOC automation pipelines and MITRE ATT&CK enrichment systems to AI-augmented workflows that collapse multi-person tasks into single-operator efficiency. I combine software engineering depth with applied security knowledge and a systematic approach to AI tooling, delivering faster, higher-quality outputs than traditional development processes.

EXPERIENCE

Freelance Software Developer & AI Workflow Engineer — Self-Employed

March 2021 – Present · Marrakesh, Morocco

- Designed and delivered production web applications for SMBs and startups: full lifecycle from architecture through deployment and maintenance.
- Built scalable front-end interfaces with React.js and Next.js; robust back-ends with Node.js/Express, PostgreSQL, and MongoDB.
- Deployed and managed applications on AWS and DigitalOcean including server configuration, environment setup, and performance monitoring.
- Improved client operational efficiency by 20–35% through custom automation tools and workflow integrations.
- Integrated Claude in Chrome with Cloudbeds and Poster to automate hotel monthly income reporting — compressing 15 days of manual data entry into under 2 minutes.
- Built automated QA pipelines using Playwright and Robot Framework connected to Claude Code, replacing manual testing cycles with self-generating test reports and logs.

Freelance Cybersecurity Engineer — Detection & SOC Automation

March 2022 – Present · Marrakesh, Morocco

- Designed and built custom SOC automation and detection engineering tooling aligned to MITRE ATT&CK framework.
- SigmaPack-Builder: converts ATT&CK-tagged detection logic into Sigma-compatible YAML rule packs ready for SOC deployment.
- SOAR Mini Enricher: FastAPI microservice providing real-time alert enrichment with MITRE mapping, severity scoring, and actionable SOC recommendations.
- ATT&CK-Tagger: rule-based MITRE enrichment engine for JSON log streams with explainable matching logic and confidence scoring.
- RareGuard: self-supervised Transformer model for rare security log anomaly detection using statistically conformal p-value outputs for high-confidence alerting.
- Focused on explainability, detection fidelity, and SOC operational integration — production usability over academic benchmarks.
- Designed modular Python architectures enabling scalable log parsing, enrichment pipelines, and rule generation workflows.

Freelance Graphic Designer & UI Specialist — Self-Employed

March 2021 – Present · Marrakesh, Morocco

- Designed user interfaces, wireframes, and UI prototypes using Figma and Adobe Creative Suite.
- Developed brand identity assets — logos, banners, and marketing materials — for digital platforms.
- Ensured visual and UX consistency across all client deliverables.

TECHNICAL SKILLS

Languages: Python (advanced) · JavaScript / TypeScript (ES6+) · Bash

Frontend: React.js · Next.js · Tailwind CSS · Figma

Backend: Node.js / Express · FastAPI · RESTful APIs · PostgreSQL · MongoDB

DevOps & Cloud: AWS · DigitalOcean · Linux server configuration · Docker (basics)

Cybersecurity: MITRE ATT&CK mapping · Detection engineering · Sigma rule development · SOC alert enrichment · SOAR automation · Log analysis pipelines · Threat-informed defense

AI & ML: Transformer-based anomaly detection · Self-supervised learning · Conformal prediction · Claude Code / Claude in Chrome · AI workflow automation · Playwright + MCP test automation

Tools: Git / GitHub · Figma · Adobe Creative Suite · VS Code · Postman

SELECTED PROJECTS

SigmaPack-Builder

- Converts ATT&CK-tagged detection logic into deployment-ready Sigma YAML rule packs. Designed for direct SOC integration.

SOAR Mini Enricher

- FastAPI-based alert enrichment microservice: MITRE mapping, severity scoring, and SOC recommendations per alert.

RareGuard

- Self-supervised Transformer model for rare event detection in security logs. Outputs statistically conformal p-values for high-confidence anomaly alerting.

Hotel Income Automation (Client Project)

- Automated monthly income reporting for a hospitality client by connecting Cloudbeds and Poster via Claude in Chrome, eliminating 15 days of manual data entry per month.

Playwright + Claude Code QA Pipeline

- Built a self-running automated testing pipeline using Playwright and Robot Framework MCP connected to Claude Code. Generates test reports and logs autonomously.

EDUCATION

Full Stack Engineering Certificate ALX Morocco	Oct. 2024
--	-----------

Baccalauréat Scientifique — SVT Lycée Mohammed VI, Ouarzazate	2019 – 2022
---	-------------

CERTIFICATIONS

- Startup Founder Certificate — ALX Ventures Morocco
- File Security Associate — OPSWAT Academy

LANGUAGES

Arabic (native) · English (C2 — professional) · French (B2)
